ARC Technologies locates in Alexander

ARC Technologies has located a manufacturing facility in Alexander County, and they are occupying an approximately 8,500 square feet facility on Liledoun Road. Following their investment of approximately \$250,000 to purchase and renovate an existing facility, the company will employ 6-10 people.

The primary product for this company is a simulated stone mailbox column weighing approximately 100 pounds. The product is intended to be an alternative for homeowners who can install this lightweight product rather than having a real stone column erected.

The product also provides tremendous safety advantages for motorists compared to real stone or brick mailbox columns. In addition, the company also produces simulated stone driveway entrance columns, fence columns, and is working on developing other products. Contact ARC Technologies at 828-635-7200.
